

THE WEB ROOM

The Web Room is a Romanian IT startup, a team with background in managing big-data custom back-ends for happy clients in SEE since 2012.

Over the years, our team members' technical solutions covered and continue to provide powerful back-end support for medium to big sized projects in industries like tourism, publishing, or gambling.

WHY US?

We are a full service solutions company (from code the solution to server's configuration and deployment), and our work is used by more than 1M Romanians every month.

Client oriented

We provide long-term cost efficient solutions, by using the latest technologies in back-end software product development, and build almost anything from the scratch.

Professionalism

We are continuously optimizing the performance of the projects, and, also, we are assuming technical leadership for the products we get involved with.

Our projects

We serviced more than 10 happy clients in SEE, providing powerful back-end support for medium to big sized projects in industries like tourism, publishing, or gambling.

Experience

Our team members have backgrounds in different industries, with more than 7 years experience on medium to big projects in terms of complexity.

API Integration Back-End Platform (Christian Tour)

Industry: Tourism

We developed a solution for Christian Tour, one of the top Romanian travel agency, to aggregate different travel APIs with output from JSON, soap, and xml, and normalize them in one REST API.

We also developed an administration dashboard for the REST API, the deployment being built and managed on a Kubernetes cluster in AWS

Status: on production, servicing 2 countries

Online ticketing sales (Super Bingo Metropolis Romania)

Industry: Gambling

The solution we provided is servicing the online sales for the biggest (and televised) Bingo platform in Romania, for all customers that are watching the show on TV and want to play it.

The platform broke 1-million-euro-revenue milestones several times and it's still counting.

Status: **on production**

MultiCMS (Adevarul Holding)

Industry: Publishing

The platform we developed has been deployed for the well known "Dilema Veche" publication, and it is able to handle, simultaneously, other publishing websites too.

On other words, the platform is a multi-tenant CMS, one code base, with one database, one deployment, and able to manage multiple sites.

Status: **on production**

Betting website (RiverBet.ro)

Industry: Gambling

We've build for scratch a betting website integrated with bet server solution, from a strong back-end service, to an easy to navigate front-end.

The solution syncs odds and matches with bet server and allow users to create betting tickets witch can be used in physical agencies.

Status: **on production**
